

VIVEK RAJAWAT

Software Engineer | MERN Full-Stack Developer | React.js · Node.js/Express · MongoDB · OpenAI API

Bengaluru, India | +91 9098389283 | vivekrajawat2005@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) |

SUMMARY

- Final-year BE (ECE) student at Cambridge Institute of Technology (graduating 2027), targeting MERN Full-Stack Developer roles.
- Shipped four independently deployed full-stack applications spanning AI agents, real-time systems, and cloud infrastructure including FocusOS, a productivity platform with an autonomous LLM agent that performs real function-calling over live task and goal data.
- Builds end-to-end across the MERN stack- React front-ends, Node/Express/MongoDB back-ends, Docker containerization, and multi-cloud deployment (Vercel, Render, AWS ECS).
- Currently deepening Data Structures & Algorithms and distributed-systems fundamentals ahead of technical interviews.

TECHNICAL SKILLS

Languages & Frontend: JavaScript (ES6+), React.js, Redux Toolkit, TanStack Query, React Router, Tailwind CSS, Framer Motion, HTML5, CSS3

Backend & APIs: Node.js, Express.js, REST API Design, JWT Authentication, Socket.io (WebSockets), bcrypt

Database: MongoDB, Mongoose

DevOps & Cloud: Docker, AWS ECS, Elastic Load Balancer, GitHub Actions (CI/CD), Vercel, Render

Tools: Git, GitHub, Postman, VS Code, Linux CLI

GenAI: OpenAI-Compatible API Integration, Prompt Engineering, LLM Function-Calling & Agentic Tool Use, LangChain Basics, RAG Pipelines

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS

PROJECTS

Resume Analyzer AI - MERN + OpenAI API, Full-Stack

[Live Demo](#)

- Engineered a full-stack resume analysis application using the OpenAI API, transforming raw resume text into structured, role-specific improvement recommendations via a 4-stage pipeline (input → backend API → AI response parsing → structured UI output), secured with JWT authentication.
- Built a prompt-engineering pipeline that generates tailored interview questions and a rewritten resume draft directly from parsed resume context.
- Developed a reusable React component library with Tailwind CSS, implementing complete loading and error-state handling across every API interaction.

FocusOS - AI-Powered Productivity Platform, Full-Stack MERN

[Live Demo](#)

- Built FocusOS, a full-stack MERN productivity platform unifying Kanban task management, goal tracking, notes, calendar, and analytics behind JWT-authenticated sessions.
- Integrated KAI, an autonomous AI agent (Groq/Llama 3.3 70B with automatic fallback) that manages real tasks and goals via LLM function-calling, grounded in live database IDs to prevent hallucinated actions.
- Built a drag-and-drop Kanban board, a Recharts analytics dashboard, and native PDF export; deployed the client on Vercel and API on Render.

Crypto Tracker - React, Live Market Data

[Live Demo](#)

- Built a React-based crypto tracker integrating a public REST API to stream live price and market data across 200+ listed assets, with a data-fetching layer handling continuous updates without UI blocking or layout shift.
- Implemented Chart.js visualizations alongside a searchable, filterable UI, cutting the steps required to locate and inspect any single asset.

Eatify - Food Delivery Website, React + Tailwind CSS

[Live Demo](#)

- Built a responsive food-delivery front-end in React and Tailwind CSS with category-filtered menu browsing, cart management, and a reusable product-card/layout system applied consistently across every page.

EDUCATION

Bachelor of Engineering (BE), Electronics & Communication Engineering

Cambridge Institute of Technology, Bengaluru, India | CGPA: 7.93/10 | Expected Graduation: 2027

LEARNING (IN PROGRESS)

Backend & Data: Redis, MySQL

System Design: Load balancing, caching strategies, microservice patterns, scalable web app fundamentals

Cloud: AWS EC2, S3, Lambda fundamentals

HOBBIES & INTERESTS

- Enthusiastic chess player – College Tournament Champion (#1) with All-India level experience; drawn to its strategic depth.
